

TOPIC 10: DATA LAKE MANAGEMENT

- Design and development of an application for the management of a data lake, able to ingest heterogeneous datasets, build and maintain a metadata repository describing them, and support their discovery, exploration, and use for analytics.
- Application domain of your choice (e.g. datasets collected from Kaggle, open data portals, GitHub repositories)
- Technologies of your choice, e.g.:
 - Relational and/or non-relational storage systems
 - Metadata catalog / metadata repository
 - Search / indexing engine
 - LLM (possibly open source)
 - ...
- Implement the tool with the chosen technologies
- Conduct experiments discussing effectiveness and efficiency
